

Ejercicio 3

`<p id="mission">`

There are a few selectors trying to apply a style to this tag which are **p**, **.text** and **#mission**, this last one is above the other two selectors due to higher specificity, so the color of the font will be Dark Orange.

`<p id="team">`

The styles trying to change the color are the **style="color : darkblue"** inline style and the **p**, **.text** and **#team** selectors. The dark blue color of the inline style will be applied thanks to the hierarchy rulings.

`<p id="experience">`

In the conflict between the rules of **p**, **#experience**, **.text** and **#about p:last-child**, this last one is applied for having a specificity of **(1,1,1)**, higher than the rest. The color applied is **Green**.

`<p id="services-intro">`

This one has a conflict in the **class** property, where both **.intro** and **text** are trying to change its color. The one who establishes the color in the end is **.intro** due to being written later in the CSS thus overriding the **.text** color change. The color of the font will be **blue**.

`<p id="offer">`

Despite having different conflicting rules such as **p**, **.text** and the **inline style**, the style **#offer** is the one who changes the color thanks to the **!important** tag on the color property that ignores any other attempts of changing it. The color will be **darkgreen**.
